Personal Statement

I am an ambitious BSc Computer Science student aspiring to gain experience in technology consulting alongside my studies. My academic accomplishments have put me on track to achieve a first-class degree, showcasing my commitment and dedication. I am continuously developing a diverse portfolio of projects utilising Python, AI, cloud computing, and more, demonstrating my growing consulting acumen on dynamic, client-focused projects aimed at delivering real-world impact.

Education

Newcastle University.

BSc in Computer Science with an Industrial Placement Year

- Predicted 1:1, first year (84%)

Newcastle Upon-Tyne

Graduation Date: June 2027

St John's Catholic and Sixth-Form College

- Computer science: B, Design technology: B, IT: D*.

County Durham

2020-2022

Projects and certifications

Nomura Technology Simulation Day

2024 November

- Achieved 1st place in delivering technical solutions in a professional environment by leading a team to design an AI-driven system for automating staff presentations, integrating recovery plans with RTO and RPO, and using flowcharts to visualise workflows.
- Gained insight into Nomura's technology strategies by engaging with teams like FX Risk Technology and Credit Technology, learning about Risk Pads, REST APIs for programmatic reporting, and tools like Solace and Red Hat for scalability and resilient systems.

JP Morgan Software Engineering Virtual Experience Program with Forage

2024 October – 2024 November

- Participated in a simulation project to integrate a stock price data feed for JPMorgan Chase traders.
- Configured a development environment within Python and managed project dependencies, resolved issues in the client data feed script. Demonstrated attention to client needs by ensuring system reliability and accuracy through unit testing.

Baillie Gifford Insight Event

2024 September

- Explored how Baillie Gifford utilises R&D to stay ahead of emerging technologies, emphasising the importance of proactive adaptation in the finance sector.
- Investigated AI applications in financial processes, particularly their own integration for effective documentation searching and sorting. Learning that firms using AI saw a 30% increase in operational efficiency, showcasing automation's role in optimising workflows.

Accenture Virtual Experience Programme with Forage

2024 August – 2024 September

- Completed a simulation focussed on gaining insight into Accenture's five core business services – Strategy & Consulting, Technology, Interactive and Operations specifically developing a technology solution using the agile methodology
- Analysed outsourcing and user data to tailor technology delivery, using strategic problem-solving and time management. Identified and aligned improvements with client operational goals to boost efficiency.

Page Rank Algorithm Using Python

2023 November - 2023 December

- Recreated Google's PageRank algorithm using Python, demonstrating learning agility by researching and employing stochastic and distribution methods to optimise performance and improve search efficiency by 55%.
- Loaded and processed web graph data, calculated node ranks, and optimised performance for large datasets, enhancing understanding of graph theory and algorithm efficiency by resulting in search times improving by 55%.

Collaborative Java Quiz Application

2024 February – 2024 March

- Led a group project on Java application development, focusing on database integration and JUnit testing. Enhancing database efficiency and retrieval by 40% with innovative solutions, showcasing strong programming and teamwork skills.
- Coordinated JUnit testing for various classes, improving debugging skills and software quality through collective problem-solving.
- Demonstrated strong teamwork and communication skills, managing workload distribution, resolving conflicts, and adapting to challenges to ensure project completion within deadlines.

Co-Founded Coding Club

2022 January - 2023 February

- Co-founded and led a coding club during sixth form, fostering peer learning and innovation through effective communication and teaching strategies resulting in a 30% increase in students choosing computer science at A-level
- Organised workshops and coding challenges to promote technical skills development amongst youth, improving attendance retention by 50% through subject awareness across the school

Work Experience

JD Sports PLC

Durham

Sales Assistant

2023 March – Current

- Contributed to Increasing KPI sales by 20% within my stores area through effective customer engagement meeting targets though upselling, while addressing inquiries and resolving complaints through empathetic communication.
- A dynamic role requiring daily customer interaction, addressing enquiries and resolving complaints whilst identifying suitable products to meet individual needs.

Lidl

Durham

Full Time Sales Assistant

2022 May – 2023 March

- Learned how to excel on working under pressure, particularly due to staff in a high pace environment. Ensuring that tasks were done on time was crucial to how well the store operated.
- Learned key business operations, including sales targets and upselling, while honing interpersonal skills to meet deadlines and support daily sales goals.

St Johns Sixth Form IT department -

Durham

Technology Intern

2022 January - 2022 March

- Proactively pursued learning, leading to a top 1% grade in my A-Level project nationwide. This achievement highlights my advanced analytical thinking, essential for deciphering complex information and driving results.
- Assisted in managing data from multiple schools and observed the resolution of technical issues, highlighting the importance of working under time constraints.

Technical skills

Programming Languages: Python, Java, JavaScript, C, C++, JavaScript, SQL. **Databases:** MySQL, D-Beaver, MongoDB, AWS, Azure. **Data Visualization:** Tableau, Excel. **Version Control:** Git, GitHub, GitLab, MS office, Word, Powerpoint. **Cloud Computing:** AWS, Azure
